FurnituresPro Sales & Customer Analytics Case Study — Dashboard Summary

Prepared by: Gurpreet Singh

CONTENTS

1. Objective
Overview of dashboard goals, analytical focus, and decision-support intent.

2. Data Preparation & Modelling
Power Query transformations, schema design, and relationship architecture.

3. Key Performance Indicators (KPIs)
Core metrics used to evaluate sales, profitability, targets, and simulations.

4. Sales Performance Dashboard
Features, visual design, and insights from multi-year sales analysis.

5. Customer Analytics Dashboard
RFM segmentation, customer strategy scoring, and acquisition insights.

6. Advanced Analytics
What-If simulation, Pareto analysis, contextual ranking, and scenario modeling.

7. Interactivity & User Experience
Dynamic filters, drilldowns, and dashboard navigation design.

8. Custom Navigation System
Application-style navigation framework for guided dashboard exploration.

9. Business Insights & Value
Key findings and decision-making impact derived from the dashboards.

FurniturePro Sales & Customer Analytics - Case Study Summary

Objective: The dashboard was developed to analyse sales performance and customer behaviour using interactive visualizations, advanced DAX measures, and structured data modelling to support decision-making.

Data Preparation & Modelling:

- Cleaned and transformed datasets using Power Query
- Created relationships across Orders, Customers, Products, Targets, Calendar, and Salesperson tables
- Built calculated columns strictly within Power Query where required
- Designed a star schema model for optimized performance

Key KPIs

- Total Sales (Sales - Returns)
- Target Achievement %
- Margin %
- YoY Growth %
- Simulated Profit (What-If analysis)

Sales Performance Dashboard
Features:

- 4-year sales trend with YoY comparison
- Regional, category, and segment performance breakdown
- Target achievement benchmarking
- Discount What-If profit simulation
- Pareto analysis to identify top customer contribution

Insights:

Consumer segment drives the majority of revenue

East & West regions outperform targets

Sales show steady YoY growth with strong recovery post-dip

Customer Analytics Dashboard
Features:

- RFM segmentation (High / Medium / Low value customers)
- Customer strategy scoring (growth, retention, reactivation)
- New customer analysis (2021 acquisition metrics)
- Segment-wise top salesperson performance

Insights:

- High-value customers contribute disproportionately to revenue
- Repeat customers form the backbone of revenue stability
- Targeted segmentation highlights growth opportunities

Interactivity:

- Dynamic filters by year, region, state, city, segment
- Drilldowns and contextual ranking
- Scenario simulation using What-If parameters

Additional Feature:

Custom Navigation & User Experience Design

A fully functional custom navigation bar was designed to provide an application-like user experience across dashboards. Instead of relying on default page navigation, interactive buttons allow seamless switching between views such as Sales Overview, Target Benchmarking, and Customer Analytics.

This navigation system improves usability, encourages guided exploration, and creates a structured storytelling flow for business users. The layout and interaction design were intentionally built to simulate a modern analytics application, ensuring clarity, accessibility, and a professional dashboard experience.

Business Value:

The dashboards enables--

- Target tracking and performance benchmarking
- Customer prioritization strategy
- Revenue concentration awareness
- Decision-ready insights through visual storytelling
